

Trends in Surgical Reconstruction of Primary Cleft Palate

Reha S. Kisnisci

Professor in Oral and Maxillofacial Surgery

The presentation will be structured starting from outlining the current information on the surgical repair of cleft palate. This will lead to drawbacks and controversies of commonly used techniques and management protocols. Personal opinions of the evolved surgical approach will be shared and presented. Seldomly visited selected aspects of cleft care will also be discussed along with possible and required clinical research domain.
